

ACRYFILL PLV

CHEMICAL COMPOSITION

Proteins, polyamides

CHARACTERISTICS

<i>Appearance:</i>	<i>white liquid</i>
<i>pH in solution at 10%:</i>	<i>7 - 7,5</i>
<i>Phase:</i>	<i>watery</i>
<i>Product uses:</i>	<i>base costs, coverings, fixings</i>

PROPERTIES

ACRIFILL PLV is a non-thermoplastic binder used by plating and glazing.

Its use is recommended also in finishings where a superior gloss grade, such as by "patinè" item, is requested.

ACRYFILL PLV gives a film that is full, homogenous, brilliant and pleasant to touch, and is compatible with other proteic binders. Can be fixed with formaldehyde.
